Spartan-3 Generation FPGAs –
The Ultimate Low-Cost Applications Platform

XILINX®

ONE GENERATION –
MULTIPLE DOMAIN

### All the Choice You Need to Solve Any Design Challenge

With the introduction of the Spartan™-3AN and Spartan-3A DSP platforms, the Spartan-3 Generation of FPGAs now offers a choice of five platforms, each delivering a unique cost-optimized balance of programmable logic, connectivity, and dedicated hard IP for your low-cost applications.

Mainstream
- Broad range of densities, general functionality and targeted specific application solutions
- Lower total system cost while increasing functionality

Spartan-3E
Logic-optimized

Spartan-3
Highest density and pin-count

SPARTAN-3

Spartan-3A
I/O-optimized

DSP
- Integrated DSP MACs and expanded memory
- Optimized for signal processing applications

Spartan-3A DSP
DSP-optimized

Spartan-3AN
Non-volatile

Non-Volatile
- Combines leading-edge technology FPGAs & Flash technologies
- New evolution in security, protection and functionality

Mainstream FPGAs

Multiple platforms — Each optimized to a specific application domain for lowest system cost

- **Spartan-3A platform** — For applications where I/O count and capabilities matter more than logic density
    - Ideal for bridging, differential signaling and memory interfacing applications
- **Spartan-3E platform** — For applications where logic densities matter more than I/O count
    - Ideal for logic integration, DSP co-processing and embedded control
- **Spartan-3 platform** — For applications where both high logic density and high I/O count are important
    - Ideal for highly integrated data-processing applications

Logic

SPARTAN-3

I/Os
OPTIMIZED PLATFORMS

Non-volatile FPGAs

**Non-volatile Secure FPGAs for Highest System Integration**

- **Spartan-3AN Platform** — For applications where non-volatile system integration, security or large user Flash is required
- Breakthrough marriage of uncompromised SRAM FPGA and Flash technologies
- Outperforms non-volatile FPGAs with unparalleled Flash reliability combined with performance and features previously available only in SRAM FPGAs
- Industry-leading security helps prevent reverse engineering, cloning, and unauthorized overbuilding
- Superior system flexibility with up to 11 Mb of on-chip user Flash

Delivering the Best of Both Worlds

SRAM-based FPGA | Non-volatile FPGA

Leading Edge Technology · Highest Performance · Low-cost · Advanced Features · Bigger Memory · Lower Static Power · Built-in Security · Single Chip · Non-Volatility · Risk-Free Configuration

Spartan™-3AN

Digital Signal Processing FPGAs

Breakthrough Price for High Performance DSP

- **Spartan-3A DSP Platform** — For applications where integrated DSP MACs and expanded memory are required
- Supports high density designs with up to 53K logic cells and robust on-chip memory
- Over 20 GMACS DSP performance for under $30 utilizing cost-optimized integrated DSP48A slices
- Ideal for designs requiring low-cost FPGAs for signal processing applications such as military radio, surveillance cameras, medical imaging, etc.
- Significant gains in application efficiency using highly parallel architectures

Virtex™-DSP Zone
- 3D Medical Imaging
- Base Stations
- HD Audio/Video Broadcast

Spartan-3A DSP Zone
- Ultrasound
- Pico/Femto Base Stations
- Consumer Video
- Video Surveillance
- Mounted Software Defined Radio

Algorithmic Complexity – As demand for processing power rapidly increases, sequential processing cannot support algorithmic complexities within required response times. To overcome these architectural limitations, the parallel processing offered by Virtex™ DSP and Spartan™ DSP FPGAs is essential.

THE ULTIMATE LOW-COST APPLICATIONS

The Lowest-Cost Programmable Logic Platform

Integrate system functions more efficiently

• Sophisticated clock management offers increased flexibility and control for high-performance systems

• Embedded 18 Kbit dual-port RAM blocks provide efficient processor code and data storage

• Embedded 18 x 18 multipliers deliver high-performance DSP

• Distributed RAM and shift registers for smallest design footprint

The Most Comprehensive Configuration Capabilities

Reduce system cost, boot with different functions, and upgrade reliably

• Broadest Flash memory support for lowest-cost configuration, including

  Platform Flash and commodity serial (SPI)* and parallel Flash memories

• MultiBoot* capability for multiple system configurations from the same hardware

The Leading Connectivity Platform

Implement multiple bridging, differential signaling and memory interfaces with SelectIO™ Technology

• Supports most popular and emerging single-ended and differential signaling standards including TMDS, PPDS®, SSTL3 Class I & II**

• Pre-engineered interface IP solutions including PCI™, PCI Express®, USB, Firewire, CAN, SPI, I2C, and more

• Full hot-swap compliance and 3.3V support **
Flexible, Low-Cost Security

Deter reverse engineering, cloning and overbuilding

• Unique Device DNA serial number

• Factory Flash ID for integrated Flash***

• Customizable algorithms for authentication
  as well as non-authentication responses

PLATFORM

Flexible Power Management

3A   3AN   3A DSP

Reduce system power consumption

- Suspend mode reduces total FPGA power more than 40%
- Hibernate mode reduces quiescent power up to 98%

Valid

Data Lines

Calibration

Clock

The Best Design Margins with Low-Cost Source Synchronous Interfacing Technology

3A   3AN   3A DSP

Ensure reliable data-clock synchronization

- Dynamic Input Delay technology with real-time flexibility
- Simplifies DDR and DDR2 memory interface design

Industry's Largest On-chip User-Flash

3AN

**Customize designs with up to 11Mb user-Flash**

- Real-time control with fine-grained protection, lockdown and erase
- 20-year data retention with 100K write cycles

Flash Memory
Breakthrough DSP Performance Using DSP48A Slices and Robust Memory

3A DSP

Implement your designs with over 20 GMACS for under $30

- Up to 126 DSP48 slices — each providing 18 x 18 multipliers, 18-bit pre-adder and 48-bit post-adder/accumulator
- Up to 2,200 Gbps Memory Bandwidth — best in its class!
- Up to 2268 Kbits of performance — enhanced blockRAM and 373 Kbits of distributed RAM — 2X more internal memory
- Sample rates up to 250 MSPS

The Right Fit for the Right Application

The comprehensive portfolio of Spartan platforms allows customers to choose the best solution for their unique design requirements.

Platform	Spartan-3	Spartan-3E	Spartan-3A	Spartan-3AN	Spartan-3A DSP
Cost-Optimization	High logic density and I/O count	Logic density	I/O count & Capabilities	Non-volatile Capabilities	DSP Capabilities
Ideal Applications	High logic and I/O densities–highly integrated data-processing	Lowest-cost density–logic integration, DSP co-processing, embedded control	Wide or multiple interfaces-bridging, differential signaling, memory interfaces	Space-critical or secure applications as well as low cost embedded controllers	Signal Processing applications such as military radio, cameras, medical imaging, etc.
Logic Cells	1,728 to 74,880	2,160 to 33,192	1,584 to 25,344	1,584 to 25,344	37,440 to 53,712
I/Os	63 to 784	66 to 376	108 to 502	108 to 502	309 to 519
User Flash	—	—	—	Up to 11Mb	—
Security	External with secure PROM	External with secure PROM	Internal with Device DNA	Internal with on-chip configuration, Device DNA, and Factory Flash ID	Internal with Device DNA
Power Management	• XPower Analyzer and Web Power Tools	• XPower Estimator and XPower Analyzer Tools	• Suspend–more than 40% reduction • Hibernate–up to 98% reduction • XPower Estimator and XPower Analyzer Tools	• Suspend–more than 40% reduction • Hibernate–up to 98% reduction • XPower Estimator and XPower Analyzer Tools	• Suspend–more than 40% reduction • Hibernate–up to 98% reduction • XPower Estimator and XPower Analyzer Tools
SelectIO™ Technology	• Supports 24 differential and single-ended I/O standards • Up to 24mA drive • DDR and DDR2 memory interfaces	• Supports 18 differential and single-ended I/O standards • Enhanced differential signaling with on-chip termination • Up to 16mA drive • DDR memory interfaces	• Supports 26 differential and single-ended I/O standards • Enhanced differential signaling with on-chip termination • TMDS, PPDS, RSDS, LVDS, DDR, DDR2 and SSTL3 class I & II • Full 3.3V and hot swap compliance	• Supports 26 differential and single-ended I/O standards • Enhanced differential signaling with on-chip termination • TMDS, PPDS, RSDS, LVDS, DDR, DDR2 and SSTL3 class I & II • Full 3.3V and hot swap compliance	• Supports 26 differential and single-ended I/O standards • Enhanced differential signaling with on-chip termination • TMDS, PPDS, RSDS, LVDS, DDR, DDR2 and SSTL3 class I & II • Full 3.3V and hot swap compliance
DSP Resources	• Embedded 18 x 18 multipliers • 18 Kbit dual-port RAM • Distributed RAM and shift registers	• Pipelined, embedded 18 x 18 multipliers • 18 Kbit dual-port RAM • Distributed RAM and shift registers	• Pipelined, embedded 18 x 18 multipliers • 18 Kbit dual-port RAM • Distributed RAM and shift registers	• Pipelined, embedded 18 x 18 multipliers • 18 Kbit dual-port RAM • Distributed RAM and shift registers	• Integrated XtremeDSP™ • DSP48A provides an 18-bit x 18-bit multiplier, 18-bit pre-adder, 48-bit post-adder/accumulator
Configuration	• Platform Flash, with easy in-system reprogramma-bility, compression, JTAG and full ISE tool support	• Platform Flash with full support • Parallel Flash with MultiBoot • SPI Flash • JTAG and ISE tool support	• Platform Flash with full support • Parallel Flash with MultiBoot plus watchdog • SPI Flash • JTAG and ISE tool support	• Platform Flash with full support • Parallel Flash with MultiBoot plus watchdog • SPI Flash • JTAG and ISE tool support	• Platform Flash with full support • Parallel Flash with MultiBoot plus watchdog • SPI Flash • JTAG and ISE™ tool support

FAST, FLEXIBLE
SYSTEM

Implement Customizable Low-Cost Solutions with Pre-engineered IP

Optimized silicon and application-specific IP enables optimized solutions with popular low-cost interface standards.

PCI Express®
- Fully-compliant to PCIe® Specification v1.1
- Starter Kit for PCI Express including development board
- LogiCORE™ PIPE Endpoint for PCI Express
- Reference Design with third-party PHY
- Bundled solution pricing

PCI™ 33 and 66MHz, fully PCI 3.0-compliant
- PCI32 and PCI64 LogiCORE IP cores
- Customizable back-end functionality

Ethernet
- Designed to the IEEE 802.3-2002 specification for 1000 Mbps, 100 Mbps, and 10 Mbps modes
- Customizable LogiCORE Tri-Mode Ethernet MAC
- Integrates with the Ethernet 1000BASE-X PCS/PMA or SGMII LogiCORE for implementation of Ethernet Link and Physical layers

DSP
- FEC blocks including Viterbi, Reed Solomon, Convolution Encoder and standard specific IP blocks such as WIMAX, W-CDMA, DOCSIS
- Video Codecs: MPEG4, H.264, etc.

Embedded Processing
- Customizable 32-bit MicroBlaze™ soft processor with a full set of peripherals and reference designs
- No risk of processor or code obsolescence
- Flexibility to perform rapid design updates and changes
- Embedded Development Kit and award-winning Platform Studio tool suite
- Small-footprint PicoBlaze™ 8-bit processing solution for assembly-programmed applications
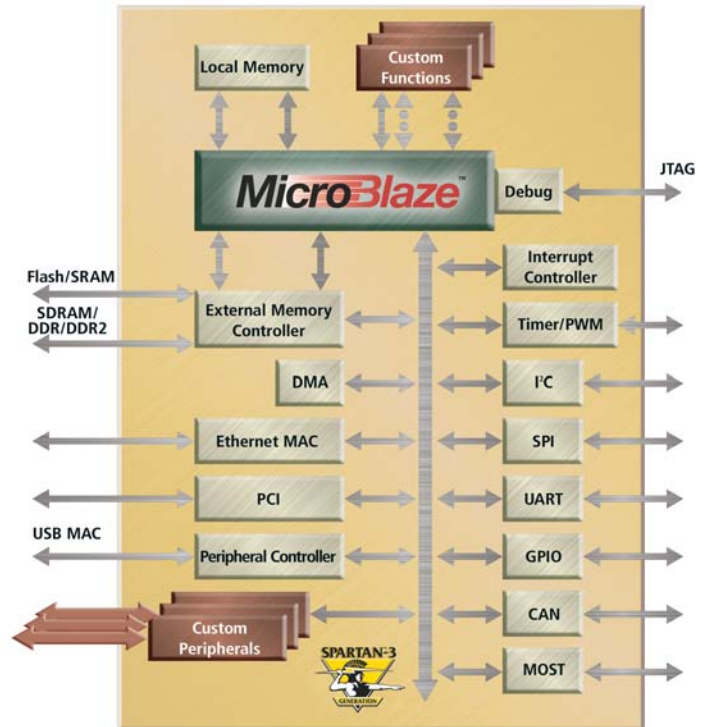

SPI-4.2, functionally compliant with OIF and SATURN® specifications
- SPI4.2(PL4) Lite LogiCORE delivers Sink and Source cores selected and configured through Xilinx CORE Generator™

CAN, designed to ISO 11898-1, CAN2.0A and CAN2.0B specifications
- User-configurable CAN LogiCORE IP
- Stand-alone mode or connected to Xilinx MicroBlaze processor

Memory Interfaces
Dynamic Input Delay Technology and the Memory Interface Generator tool make it easy to build reliable interfaces to the latest low-cost memories, including DDR2 and DDR

Memory Device	Electrical Interface	Clock Rate	Data Rate
DDR2 SDRAM	SSTL 1.8V	200 MHz	400 Mbps
DDR SDRAM	SSTL 2.5V	166 MHz	333 Mbps

Over 300 IP Blocks Available Today – www.xilinx.com/ipcenter

INTEGRATION

Accelerate to Market with Development Boards and Starter Kits

The Spartan boards and Starter Kits provide a complete development solution giving designers instant access to the capabilities of the Spartan FPGAs. The Starter Kit includes a development board, power supply with universal adaptors, and much more.

Board/Kit	Part numbers	Price
Spartan-3A DSP Development Board	HW-S3A-DSP-SK-UNI-G	$1,095
Spartan-3AN Starter Kit	HW-SPAR3AN-SK-UNI-G	$239
Spartan-3A DDR2 SDRAM Interface Development Kit	HW-SPAR3ADDR2-DK-UNI-G	$235
Spartan-3A Starter Kit	HW-SPAR3A-SK-UNI-G	$225
Spartan-3E Starter Kit	US: HW-SPAR3E-SK-US-G UK: HW-SPAR3E-SK-UK-G Europe: HW-SPAR3E-SK-EC-G Japan: HW-SPAR3E-SK-J-G	$149
Spartan-3E PCI Express Starter Kit	Japan: HW-S3PCIE-DK-J Rest-of-world: HW-S3PCIE-DK	$349
Spartan-3E 1600E MicroBlaze Development Kit	DO-SP3E1600E-DK-UNI-G	$595
Spartan-3 Starter Kit	HW-SPAR3-SK-UNI-G	$149

Spartan-3A Starter Kit

Flexibility and Low Cost –
The Ultimate Choice for Volume Applications

Systems designers worldwide are leveraging the unique advantages of Spartan-3 Generation FPGAs across a wide range of end applications, adapting their products to rapidly changing interface and data standards, differentiating functionality with minimum design time, and reducing risk as they ramp to higher production volumes.

Examples	Application Challenges	Spartan-3 Generation Advantages
Flat Panel Displays	• Panel board and video/tuner board cost • Constantly evolving I/O requirements • Shorter product life cycles with higher amortized cost risk for new ASICs • Constantly evolving, subjective image quality requirements • Differentiating vs. competing hardware	• 5 domain-optimized platforms for lowest-cost fit to each application • SelectIO™ Technology with on-chip differential termination and widest I/O standards compliance, including LVDS, RSDS, mini-LVDS, PPDS and TMDS • Pre- or post-processing video enhancement, LVDS TxRx (FPDLink), and peripheral interface bridging solutions • TCON (timing control) and video co-processing flexibility • Flexible peripheral interfacing and video switching • Reference designs for precise gamma correction, image dithering, color temperature correction and other video-enhancement functions
Set-Top Boxes	• Evolving interface standards for memory, disks, and other components • Managing inventory with multiple product feature sets • Differentiating video processing capability at lower power and cost • Accelerating and updating algorithms for conditional access/security	• SelectIO Technology with support for up to 26 different I/O standards • MultiBoot reconfigurability and density migration within a single package • XtremeDSP Technology with industry-leading price/performance for digital video decoding • Fast, compact IP cores for authentication and content encryption
Wireless Access	• Low-level MAC-layer co-processing in Customer Premises Equipment • Forward Error Correction and DSP co-processing efficiency • Peripheral bridging and interfacing	• IP cores for MAC, FEC, encryption, digital up/down conversion and security • XtremeDSP Technology with flexible high performance • SelectIO Technology with on-chip termination and wide I/O standards support
Industrial Ethernet and Motion Control	• Bridging multiple connectivity protocols • Customizing PWM and control algorithms • Accelerating motion control algorithms	• IP cores for EtherCAT, SerCOS III, CAN, Ethernet, PCI and PCI Express • Flexible Xilinx Embedded Processing Technology • Hardware acceleration with Fast Simplex Link and XtremeDSP Technology
Automotive	• Full compliance to industry production process and quality standards • Interconnecting different automotive/multimedia standards	• Extended Automotive temperature ranges, both Industrial and Q-Grade; full PPAP support and AEC-Q100 qualification for Spartan-3 and Spartan-3E platforms • IP cores for bridging CAN, LIN and MOST®, as well as USB 2.0 and Ethernet • XtremeDSP Technology with industry-leading price/performance/power and IP for filtering, edge detection, and codes • SelectIO Technology with on-chip termination for LVDS, RSDS and other standards
Video Surveillance	• DSP performance need for object recognition, motion detection and advanced compression algorithms • Changing industry standards • Rapidly evolving technology such as automated scene analysis	• XtremeDSP performance through parallelism in FPGA fabric • FPGA flexibility and scalability • Field upgradeability
